

## **OUTSTANDING RANGE FOR THE 12-METERS BLUEBUS WITH 387 KILOMETERS DRIVEN**

Equipped with Blue Solutions "all-solid" Lithium-Metal-Polymer (LMP®) batteries (totalizing 354 kWh), the 12-meters Bluebus delivers 387 kilometers of autonomy measured with E-SORT 2<sup>(1)</sup> cycle. These operating cycles, established by the UITP<sup>(2)</sup> and confirmed by the UTAC<sup>(3)</sup>, are the reference for measuring vehicles consumption. The E-SORT 2 standard is a mixed city and suburban cycle corresponding to the 12-meters bus main use cases.

The tests were carried out under real conditions of public transport use with regular stops between city centers and suburbs. The average speed was 18km/h and additional weight was placed in the bus accounting for half the total passenger capacity.

"We are very pleased with this performance, as it demonstrates once again our know-how and proves the excellent autonomy of our 12-meters Bluebus," says Richard Bouveret, CEO of the Battery, and Electric Bus Division.

(1) Standardised On Road Test

(2) International Union of Public Transport Operators

(3) UTAC, a leading group in vehicle testing, homologation, and new technologies for autonomous, connected, and electric vehicles

## **About Bluebus**

Created in 2007 in Ergué-Gabéric (Brittany, France), Bluebus, part of the Bolloré Group, is a French manufacturer of 100% electric buses. Available in 6 and 12 meters, these buses are equipped with all-solid-state batteries produced by Blue Solutions.

The production sites of Bluebus and Blue Solutions are certified ISO 9001 & ISO 14001 and received the Guaranteed French Origin label.

The Bluebus range offers zero-emission technology and a silent solution responding to the requirements of public bodies and transport operators for clean and sustainable mobility. Today, more than 530 Bluebus e-buses are in operation around the world.
